

# Facing Rising Labor Costs, Manufacturing Company Uses Remote Guarding to Combat Increased Expenses

*A manufacturing company was concerned about their budget when faced with the need to increase wages for its security officers. In response, Securitas offered Remote Guarding services which allowed the client's overall spend to remain flat.*

## The Challenge

A manufacturing parts and services company located in Central Pennsylvania recognized the need to increase the wages of their guards to meet labor market demands, but were concerned about their already tight budget. Having always utilized on-site guards, the client was initially skeptical about applying Remote Guarding technology to prevent potential intruders and possible theft.

Additionally, the company's existing camera system did not share the same technical interfaces as Securitas' remote technology and would not work for Remote Guarding purposes. Without guarding or proper surveillance, the corporate office and its back gate would remain vulnerable, as the location faces a high traffic street.

## The Solution

### **RGWatch Ultra**

Fortuitously, the company had decided to update their camera system throughout their corporate offices, allowing Securitas to propose the use of remote tours through **RGWatch Ultra**.

With exceptional fields of view from its multi-sensor HD camera that connects directly to the Securitas Operations Center, the *Ultra* solution is ideal for locations needing flexible and rugged security. Through this change, the company is now leveraging technology to efficiently monitor its corporate office location, apply analytics, and provide real-time alerts if the property should ever become compromised.

While considering the implementation of **RGWatch Ultra** to help deter and mitigate security threats at the vulnerable back gate, the client also decided to add the solution to their front gate, providing an even more immersive security experience.

## The Results

By implementing this new strategy, the company was able to maintain their current program's capabilities while **RGWatch Ultra** provides increased surveillance and protection, without the client having to break their budget due to increasing labor costs.
